AMBIGUITY RESOLUTION BRIEF	2
SAFE EXECUTION DECISION	5
STAKEHOLDER DECISION UPDATE.....	7

AMBIGUITY RESOLUTION BRIEF

1. Founder Request

The founder wants recruiters to be able to override AI scores and manually shortlist candidates before the pilot. This gives recruiters more control over hiring decisions. However, it is not clearly defined what should happen to candidate notifications after this manual change.

2. Known Facts

Known Fact	Source
Recruiters want manual shortlist option	Recruiter Feedback
Founder wants quick feature for pilot	Founder Message
AI scoring already exists	Product Context
Status changes may cause confusion	Engineering Note
Recruiters want to avoid early notifications	Recruiter Feedback
Minimal safe version is allowed	Business Constraint

3. Open Ambiguities

Ambiguity	Why It Matters	Risk If Ignored
Should candidates be notified after manual shortlist?	Defines communication behavior	Wrong or premature candidate messages
Is manual shortlist final or temporary?	Affects status clarity	Confusion in candidate expectations
What if recruiter changes decision later?	Affects update flow	Multiple conflicting messages
Should system auto-notify or wait for confirmation?	Defines system logic	Broken candidate experience

4. Clarification Question

Should manual shortlist trigger candidate notifications immediately, or only after final recruiter confirmation?

This is important because it decides how and when candidates are informed.

5. Bounded Assumptions

Assumption	Why It Is Safe	Risk If Wrong
Manual shortlist is internal action in V1	Keeps system simple	Stakeholders may expect notifications
No notifications in V1	Avoids confusion	Recruiters may expect updates
AI score stays visible	Maintains trust	UI expectations may differ
Override is logged	Ensures tracking	Extra audit needs later

6. Minimal Safe V1

What We Build	Why It Is Safe
Manual shortlist feature	Gives recruiter control
Show AI score + manual decision	Keeps transparency
Log all overrides	Ensures accountability
No candidate notifications	Prevents communication mistakes

7. What Not To Build

- Email notifications
- WhatsApp notifications
- In-app notifications
- Approval workflows
- Role-based permissions
- Audit dashboards

Why:

Because we have not defined when or how candidate communication should happen after changes.

8. Final Decision

Proceed Conditionally

We allow manual shortlist, but we do NOT send candidate notifications yet until communication rules are defined.

SAFE EXECUTION DECISION

Student : Gourik Narendra Patil

Assigned packet/ Variant ID: D4-B (Notification Ambiguity)

Date : 11/06/2026

Minimal Safe V1

We will only allow recruiters to manually shortlist candidates and update AI-based decisions internally. The system will NOT notify candidates automatically.

Risks Prevented

Risk	How It Is Avoided
Wrong communication	No notifications sent
Confusing candidate experience	No conflicting messages
Audit confusion	All overrides are logged
Overengineering	No complex systems built

Rejected Scope

- Notification system (email/WhatsApp/app)
- Approval system
- Permission roles
- Audit dashboard
- Bulk actions

Reason:

These depend on unclear communication rules and would increase complexity unnecessarily.

Final Judgment

The feature is useful and needed, but communication rules are unclear. So we keep scope small, allow manual shortlist internally, and delay notifications until rules are defined.

STAKEHOLDER DECISION UPDATE

Student : Gourik Narendra Patil

Assigned packet/ Variant ID: D4-B (Notification Ambiguity)

Date : 11/06/2026

Decision

- ☐ Proceed
- ☒ Proceed Conditionally
- ☐ Block Pending Clarification

Message to Founder

We will implement manual shortlist for recruiters before the pilot. However, we will not send candidate notifications yet because the communication behavior after manual changes is not defined.

For now:

- Recruiters can override AI scores
- AI score will still be visible
- All changes will be logged
- No candidate notifications will be sent

This ensures recruiters get control without risking confusing candidate communication.

Key Ambiguity

When a recruiter manually changes a candidate status, should the candidate be notified immediately or only after final confirmation?

Clarification Question

Should manual shortlist trigger immediate candidate notification, or only after final recruiter confirmation?

Safe Assumptions

Assumption	Why It Is Safe	Risk
Manual shortlist is internal only	Reduces risk	Stakeholders may expect notifications
No notifications in V1	Prevents confusion	Feature expectation mismatch
AI score remains visible	Maintains trust	UI expectation mismatch
Changes are logged	Ensures tracking	More audit needs later

Scope Boundary

We will NOT build:

- Notification systems
- Approval workflows
- Permission systems
- Audit dashboards

Because communication rules are not yet defined.
